

CASE STUDY: NONOTUCK RESOURCE ASSOCIATES INC. REDUCED ACCOUNTING WORKFLOW TIME FROM TWO HOURS TO TWO MINUTES WITH DATA BLEND IPAAS

INDUSTRY VERTICAL

NOT-FOR-PROFIT HEALTHCARE/HUMAN SERVICES

INTEGRATED APPLICATIONS

SAGE INTACCT | ADAPTIVE | EDI AUTOCLAIM

INTRODUCTION

Nonotuck Resource Associates, Inc. offers Shared Living, Adult Family Care, and personalized day services for people with disabilities. Each of their

services is dedicated to their mission of providing people with disabilities a choice, a voice and the opportunity to live authentic lives. Support and service locations can be found in Boston and across Massachusetts.

Ryan Gaw has been the Accounting Manager at Nonotuck for 4.5 years. He currently uses Sage Intacct and Adaptive Insights for budgeting and planning. Ryan also uses EDI Autoclaim for managing billing and payment claims and AFC Home as their electronic medical record system.

SITUATION

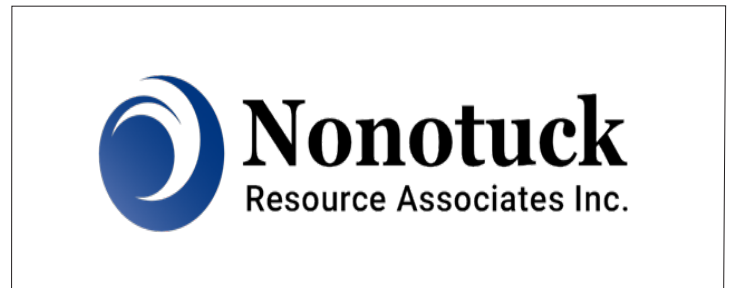

Nonotuck was working toward adopting Sage Intacct and Adaptive Insights. They consulted with Carlson Management (now Alight) to purchase and implement the two systems. Carlson recommended DataBlend as the iPaaS solution to integrate the systems. After the integration was completed, Nonotuck wanted DataBlend to integrate a third application called EDI Autoclaim, a medical billing application used in the industry.

“With DataBlend, we’re spending less time fixing problems and more time being proactive”. - Ryan G. - Accounting Mgr.

CHALLENGE

Ryan and his colleagues historically did a lot of manual data entry, exporting data from one system, manipulating it manually within spreadsheets, adding proper formatting, creating reports, uploading the data back into another system then waiting hours for the uploads to complete. After implementing Sage Intacct and Adaptive, the team’s goal was to maximize workflow efficiency, reduce number of data errors, significantly improve turn times on data transfers and automate redundant tasks.

Examples of specific challenges: 1) revenue posting took two hours to complete. 2) Extracting, transforming and loading data took several hours per report. 3) Wait times for data to load could take several hours.

TRANSFORMATIONS

Data Parsing

based on unique identifier

Sign Flipping

GL accounts flipped as necessary

Split Label Creation

for rows with dimensions for Adaptive acceptance

Actuals Removal

in Adaptive for accuracy

Pivot Transactions

into monthly and annual summarized data for Adaptive upload

Cell Removal

Zero value or \$0 cells removed for efficient review

SOLUTION

DataBlend successfully integrated Sage Intacct, Adaptive Insights and EDI Autoclaim for Nonotuck. By integrating the three applications, Ryan was able to:

- Reduce revenue posting time from 2 hours to 2 minutes
- Save 8-16 hours a month by automating workflows
- Increase data entry efficiency 100%
- Reduce rate of error to 0%
- Focus more on being proactive rather than reactive

CONCLUSION

Nonotuck has gained incredible efficiencies by automating workflows leveraging DataBlend's iPaaS solution. Most manual work has been removed from Ryan's daily processes and he is now able to focus more time on other important responsibilities.

"DataBlend has helped us maximize efficiencies, eliminate manual data entry and errors, and accelerate data transfers. With DataBlend, we're spending less time fixing problems and more time being proactive." - Ryan G. - Accounting Mgr.

ABOUT DATABLEND

DataBlend is an Integration Platform as a Service (iPaaS) solution designed exclusively for CFOs, controllers, and their teams. Featuring a no-code, low-code workflow builder, DataBlend allows accounting and finance professionals to create secure and worry-free data integrations. Companies use DataBlend to collect and join data from multiple sources, build workflows (e.g. field to field mapping, pivot tables, and additional data transformations through virtually unlimited custom scripting possibilities), and schedule events so users are never without real-time data access. DataBlend's intuitive interface makes it easy to manage all application integrations from a single platform, eliminating the need to rely on IT resources to manage multiple, point-to-point connections.
